LEAD SOFTWARE ENGINEER / AI & AGENTIC SYSTEMS

New Delhi, India • akshaygautamofficial@gmail.com

Portfolio • LinkedIn • GitHub

PROFILE

AI-native engineering leader with 9+ years building scalable backend, cloud, and agentic systems. Combines hands-on delivery with team leadership to improve performance, reliability, and operating cost. Builds human-guided agents for automation and software development.

IMPACT AT A GLANCE

20%
faster Microsoft Teams Whiteboard responsiveness

1,400 ms
better Word Online time to visual ready

300 ms
reduction in Word Online boot time

15–20%
lower CDN operating costs after 1CDN modernization

EXPERIENCE

Google Cloud / Lead Software Engineer

SEP 2025 – PRESENT

Leading work on a mission-critical, heavily queried Google Cloud Support service with stringent low-latency requirements.

- Lead work on a mission-critical, heavily queried Google Cloud Support service with stringent low-latency requirements.
- Led two L4 and two L3 engineers to build a Support automation and reporting platform.
- Builders describe automation intent in natural language; AI generates a complete automation.
- Building Artificial Intern, an autonomous coding agent that takes assigned tasks, proposes a plan for approval, implements approved work, and learns from pull request feedback.

Microsoft R&D / Software Engineer 2

AUG 2021 – SEP 2025

Worked across Teams and Planner Copilot, Whiteboard, Word Online, and Microsoft 365 content delivery.

- Improved Teams Whiteboard responsiveness by 20%; partnered with product and UX on Copilot features that turn meeting discussion into actionable diagrams.
- Reduced Word Online boot time by 300 ms and improved time to visual ready by 1,400 ms.
- Led 1CDN modernization with dynamic CDN switching, lowering operating costs by 15–20% and improving delivery reliability across regions.
- Developed Teams and Planner Copilot agents and skills; mentored interns on A2A and vector persistence projects.

Selected Experience

ENGINEERING IMPACT / SYSTEMS / LEADERSHIP

AG

FAREYE IMPACT

30–40%
lower AWS infrastructure costs

15 → 2–3 days
faster report turnaround

15%
traffic moved off the monolith

FarEye (Roboticsware) / Software Development Engineer → SDE 2

APR 2019 – AUG 2021

Built and optimized backend services and products across reporting, integrations, and logistics.

- Redesigned Reports & Insights around Redshift: cut report turnaround from 15 days to 2–3 days, reduced legacy-system load by 10%, and lowered AWS costs by 30–40%.
- Built a connector microservice that moved 15% of traffic off the monolith and improved responsiveness and availability.
- Optimized FarEye Mobi to reduce latency and improve throughput and stability.
- Led FarEye Loupe, a hackathon knowledge-sharing platform for employee solutions.

G4S IT Services / Associate Systems Developer

FEB 2017 – MAR 2019

Developed APIs and frontend features for the Javelin ERP and customer portal.

- Built and integrated Javelin APIs with internal services, improving reliability and reducing integration complexity.
- Developed customer portal features to help clients track expenses and plan resources.

TECHNICAL TOOLKIT

AI & AUTOMATION	Agentic AI, LLMs, AI agents, Copilot, automation workflows
BACKEND	Python, Java, C#, Go, .NET, Spring Boot, microservices, REST APIs
CLOUD & DATA	Google Cloud, Azure, AWS, Docker, Kubernetes, PostgreSQL, Redis, Redshift
LEADERSHIP	System design, performance optimization, technical leadership, mentoring

EDUCATION B.Tech, Computer Science • Manav Rachna International University • 2013–2017
